By Eashwer Latchumana

Sunday, January 30th, 2061, “Bot-E what are you doing, have you gone mad, I haven’t programmed you to run away, I have programmed you to help me, and assist in small details that I can’t see, I, as Dr.Khalyan had many failures, but there is always a success when you carefully do things, and this project is not just for me, but for the entire world,” exclaimed Dr.Khalyan as the asteroid started to launch from the suit man's orbiter. I’m

Wednesday, December 30th, 2056, “Ah, no, never, there isn’t a traitor in my research center, this is a dream, get me out!!!!!!!,” exclaimed Dr.Khalyan. “ Hey Bot-E can you please, get me some freshwater, and my glasses, also get some music running.”

“Ok my sir, also my program says there is water in the glass, should I bring that, or glasses, which in oxford dictionary says, 1. a pair of lenses set in a frame resting on the nose and ears, used to correct or assist defective eyesight or protect the eyes,” replied Bot-E.

“ Just find glasses, which I wear to protect my eyes,” replied Dr.Khalyan. Nowadays, Bot-E is always looking for homophones and starts to confuse himself, or at least he tries, again which is not written in his program. Well, Dr.Khalyan had a funny dream to say, but he is trying to innovate a country, or a human living system in extreme conditions, like to live in Antarctica for a population of a country, trying to innovate public transportation, developing space tourism (as people started to fly in space for a day or 2), increase in biodiversity, and many other things, with government, other agencies, and the public. Having a lot of development with many different researchers, and vendors, universities, schools, Dr.Khalyan is trying to change the global lifestyle safely, without affecting the environment, with climate change at its peak level.

Dr.Khalyan asked his teammates to come to his research institute, which is a very big one, with multiple contracts from different agencies including Nasa. It is also a public museum, with the most advanced technology. After proposing his idea to everyone, including global leaders, universities, agencies, etc, different people started having debates about the costs, impacts on current activities, affecting other initiatives in different countries. This debate went on for the entire day, in different series of meetings during the rest of the year. Well, there is one man who knows a perfect way to end this, Suit-Man.

Suit-Man, well another genius professor who has the credit of finding more fundamental building blocks of the universe; after finding atoms are made up of protons, neutrons, electrons, and each proton, neutrons, and electrons are made up of particles called quarks. And few types would include, up, down, charm, and photon quarks. Well, this material was theorized in 1964, but in 2056, we must have found more fundamental constituents of matter. Not just discoveries, but inventions of many technologies, creating the invisibility cloak, which might sound fictitious, but this is the reality. Suit-Man is a brilliant scientist and a researcher, who also found another

atomic element to add to the periodic table known as 'Tarden' which is a chemical element that is found in the Earth's atmosphere, and is rated with the atomic number 321, which is the highest recorded chemical element in the periodic table.

Suit-Man who is a part of the global development meetings with Dr.Khalyan started opposing every positivity of the proposal. He started giving counter-debatable points, saying that, creating a human system in extreme conditions, will start to create a communication system, which will affect the animals, as the radiation of the system is high. Though the radiation is high, there will be a safe distance from the organisms living around it, which will give a less frequency rate. Saying non-relevant reasons, Suit-Man is very greedy and jealous about this project and is prohibited from continuing the project. This became a problem for a big party, because of Suit-Man's debate, 50% of the members started to prop up against Dr.Khalyan. Now not just for a year, but the commencement of the project was postponed for another 5 years.

All the five years were very aggressive. Day by day, Dr.Khalyan has researched more about natural items in the universe that can cool the earth down, as an increase in temperature is a big problem for Dr.Khalyan. Even if Global warming is ruling the world, it isn't a big question for the scientists in the current era (Also known as the tech era), where there is a robotic evolution to help things instead of humans doing everything. Nowadays, Robots are programmed to assist societies by cleaning trash before someone throws it away on the ground. And just before the world gets polluted again, the robots just saved the day a second ago. On the other hand, Suit-Man started scheming.

Suit-Man started to create his campaign, and started to be very aggressive. *"If we create more technology, and provide space to more people and less wildlife, you are going to impact the way of life for many creatures. In the future, we will see about the problem we have now!"* exclaimed Suit-Man on global television. As more people started protesting against the government, different universities, agencies, and the man behind it, the pressure increased as the researchers find more supportive details about their project. " Dr.Khalyan needs to stop this, and if he doesn't, the five years will be known as the departure of the world, as people are fighting against their government!" said the U.S president.

" I know, people in my country have already started to protest in the government building, and there have already been two injuries by the police, because of violence," said the Canadian Prime Minister.

The world now has been in a disastrous position, as most of the countries in the world have started to organize the project with Dr.Khalyan. 5 years were very tough, as few governments backed out. The 10 trillion dollar project partnered with many companies too, backed away. And now there is very little support.

Dr.Khalyan is now in a furious manner, he tried calling many different people to help, but none answered, only his scientists, and teammates are left. Other researchers backed out too, with a note saying: *We all like your Idea, Mr.Khalyan, but your research isn't enough to start, as people started to believe Suit-Man, who has big power over his discoveries, and theories. Sorry, but call us when you have strong evidence or a solution to fight back.* Dr.Khalyan started to call Suit-Man. But, immediately, Suit-Man called just before he got called.

“ Dr.Khalyan, you have a call from a person named ‘Suit-Man’, would you like to attend it?” the Bluetooth speaker spoke.

“Yes, please attend the call now!” exclaimed Dr.Khalyan.

“Ok, attending call!” spoke the Bluetooth speaker.

“ Good evening, Dr.Khalyan, I heard many of your sponsors and teammates backed out, right?” said Suit-Man

“ What do you want, don't you want the world to be healthy?” questioned Dr.Khalyan.

“ Well that's what I wanted to ask you!” replied Suit-Man.

“ Ok, how is my technology going to affect the environment?” replied Dr.Khalyan

“ You are going to take away the habitats of many animals around the world!” replied Suit-Man.

“ I am just giving a place for people to live, decreasing the density of the world, and clearing land for the animals and nature to live without human hindrance,” replied Dr.Khalyan.

“ Well, will the people afford sustainable living, with everything in their own life?” replied Suit-Man.

“ Well people have to compromise for there to be a safe world for their future generations!” said Dr.Khalyan.” Hello, are you there? Hello, don't just run away from cheating on the entire globe, I promise you, I will start this project!”

Phew! What a rough talk, this made things even more stressful for Dr.Khalyan. To say, Dr.Khalyan, a very busy man, attending meetings, interviews from a lot of channels, researching the climate and weather patterns, teaching at his university, and being always busy for the past 10 years. He is titled the busiest man in the world. Got a record-breaking 5200 hours of work, which again broke the Guinness world record. You may think he is always stressed, but he does have some breaks.

Time has gone by crazy, but there was hope, and that hope had just gone brighter. The project got running successfully in the 5 years. The budget did increase though, with big chaos across the world. Instead of 10 trillion, it increased to 10.67 trillion dollars. But Dr.Khalyan started his first idea, a way to use a powering technology for putting solar power directly in space, and get electricity with wireless communication with satellites and other items. The solar panel is designed to orbit around the earth, so it can get light from the sun, as the earth also spins on different sides of the sun. Having the orbiting solar power made, Dr. Khalyan's team already proposed the design of the buildings, and technology to the different countries, and they have already started their construction. Everybody is in the process of changing the globe, including public service, but only one person has a mind to destroy it.

Suit Man has been eagerly waiting for his ultimate plan that continues on the streak, but how is this going to affect Dr.Khalyan? Suit-Man came rushing to Dr.Kalyan's meeting, and said, "Dr.Khalyan, I am inspired by your tech, and I am so sorry for disturbing you, so have you got any upcoming projects to discuss?", said Suit-Man

"Not right now, but I appreciate you coming back, after all that mess, but why now, I have gotten everyone's input, so why did you come back, do you have another disagreement?" replied Dr.Khalyan.

" No, but I will see you later, in space, or after you finish your project," replied Suit-Man as he went away. Not just that, there was a big fire starting to arise in the research center, and everyone started to call 911. Suit-Man also got stuck, and he started to panic more than the rest of the members in the center. His suit that he always wears has started to wear off. The heat peeled off the metallic suit. Things were getting weird, green skin showed up, there were giant ears, and long wiggly fingers, Suit-Man was not a human! Before anyone could notice, he hovered his jet pack and started back to his home, and took a spaceship that was flying across the universe.

But there was a sneaky bot who noticed an unknown creature in his program and continued to follow the location.

Suit-Man's actual name was Tieneel. You might wonder how an extraterrestrial survived in the human world, with actually learning science and discoveries. As an extraterrestrial, he knows more about the universe than any human does. He wants to bring alien life to earth, as it is a wonderful place, and has more resources than any other planet he has visited before in different galaxies. For the past 20 years, He has been living on Earth, known as Suit-Man. He has threatened many people to create an Id and a profile for him as a human. Suit-Man is a suit, a supernatural suit, with abilities in strength, resistance, and speed. The suit resembles how a human body looks, but the only difference is with heat, extreme heat , that can affect the suit to wear off. Because of warm weather, Suit-Man wears extra shields, and protective chemicals, like 'Tarden' to resist. As Suit-Man wants to destroy the life of the Earth, and move his species, he starts to create a device to attract the biggest asteroid ever found in history, which can heat and destroy the Earth.

Friday, January, 28th, 2061, Global News Flashed out: *Good Morning everyone, this is Eashwer, and we are featuring live in 2 locations, the first city built in Antarctica, and Khalyan's Space Center, to launch the rockets, and send the Solar Powers to the ISS, as it is the 62 anniversary to the ISS.* Dr.Khayan took Bot-E, and other robots with other astronauts to the ISS. 10, 9, 8, 7, 6, 5, 4, 3, 2, 1, As the rocket launched into the atmosphere, and to space.

Saturday, January, 29th, 2061. Dr.Khalyan landed on the ISS and started to prepare for the launch of the solar panels. " Big day, after 5 years of struggle, we have accomplished the project, and soon, in the next five years, there will be 100s of solar panels to power the entire world, storage, and power. And in the next 10 years, we will see another world, with wildlife,

clean earth, and new places to live in, space cruises, etc,” exclaimed Dr.Khalyan as he smiles looking down at the planet Earth. A few hours later, the first panel got released and is connected with a satellite, to check if it gives power to the ISS. Later the storage of the energy is connected with wireless communication to transfer the energy. With all the nourishing faces of the researchers, the first test got passed, and as more panels were sent, more power became a source of energy. Dr.Khalyan and his team sent 10 panels, and each one started to orbit. The day went exhausting, but satisfyingly, Dr.Khalyan and his team went to bed.

A few hours later, Dr.Khalyan woke up to get some water, and as he looked outside, he saw a green spaceship, showing a symbol- Suit-Man. Dr.Khalyan started to panic. He took up his Walkie-Talkie, and commanded to the next ship:

“ Suit-Man, is this you, what are you doing here?” questions Dr.Khalyan.

“ Ah, Dr.Khalyan looks like your prototype worked, huh? And yes this is me Suit-Man, but my name is not Suit-Man, I am Tieneel,” said Tieneel.

“ Wait, what are you saying?” said Dr.Khalyan.

“I am an alien, living in space, and guess what, I am going to destroy your entire planet, in the next 20 minutes, I have got my asteroid running, and ready to launch to orbit around the sun, mars, and other planets, and strike it to your Earth,” said Tieneel. “ I am an extraterrestrial in your humanoid terms. I have to destroy your species and get my species on Earth, it is a nice planet to say.”

“No, you can’t do that, and how wonderful you have gotten a human license, and acted as a human!” replied Dr.Khalyan. His entire team woke up, to stop the asteroid. Dr.Khalyan rushed and tried to find Bot-E, Bot-E was nowhere to be found. He suddenly took Bot-E’s software and tracked where he was. Did Dr.Khalyan leave Bot-E back on Earth? The tracker system found Bot-E, 30 meters away. He was not in the ISS, but where?

“Hey Bot-E, where are you, looks like you are 30 meters away from me, are you in Suit-Man’s ship?” questioned Dr.Khalyan through the software.” Can you reach me now?” Bot-E didn’t respond. A few minutes later, Bot-E woke up from his sleep, he found himself near a glass, where outside looked like space, he also saw a hazardous sign in front of him. “ *Oh, no, Dr.Khalyan just messaged me now, wait for what, he is 30 meters away!*” said Bot-E to himself. “ Dr.Khalyan, can you hear me? This is Bot-E and looks like I am in a spaceship, and I think, I followed Suit-Man, and did you know that he was an extraterrestrial, that’s why I followed him,” said Bot-E

“Hey Bot-E, good that you are in Suit-Man’s ship, but I need you to save the entire world, he created an asteroid, to burn the world. If you can find the asteroid near you, try to stop it, in the next 10 minutes, or else the entire world will be destroyed. There is no time to explain, go now!” replied Dr.Khalyan. Bot-E began to search for the asteroid, he didn’t know what an asteroid looked like, that was never written in his program. He tried to look through the Oxford dictionary, whether an asteroid was a thing or not. The dictionary says *1. a small rocky body orbiting the sun. Large numbers of these, ranging in size from nearly 600 miles (1,000 km) across (Ceres) to dust particles, are found (as the asteroid belt) especially between the orbits of*

Mars and Jupiter, though some have more eccentric orbits, and a few pass close to the earth or enter the atmosphere as meteors. “Wait, if it is a rock orbiting the sun, why is it Suit-Man’s ship? Maybe it is an Artificial Asteroid, well I know it is a rock, a small rock, or a giant rock,” thought Bot-E. Bot-E found some rocks outside space, but he just left them, thinking it was big enough to destroy the earth. But how do you think it would fit in a spaceship? There has got to be something else going on.

Dr.Khalyan got a message from Bot-E, that there wasn’t a detectable asteroid. Dr.Khalyan thought again. Maybe, there isn’t a giant asteroid in the ship, maybe the suit-man has a magnet or something that will change the asteroid's direction to the Earth. Dr.Khalyan asked a nearby researcher whether an asteroid was coming nearby. And after they searched, they got info from a nearby satellite showing a long asteroid, about a diameter of 3024 km, which is bigger than Pluto, and is going to pass Earth to another planet. Dr.Khalyan quickly reached Bot-E, and asked if there was any stabilizer or a magnet, or any device which has a force of attraction nearby. There came a call from Tieneel.

“Hey Dr.Khalyan, did you get any clue, in another 5 hours, your Earth is going to go away. And I believe that you know I don’t have an artificial asteroid.” Tieneel then cut the call. Bot-E soon detected a missile that was going to hit in the next 2 hours. Bot-E was confused, how could a missile be related to destroying earth. Bot-E told about the missile to Dr.Khalyan, and asked how the missile could be related to destroying Earth. Dr.kHalyan got the solution to the missile and asked Bot-E to remove it quickly. Bot-E was still adamant, and asked why. Dr.Khalyan told that, the missile is going to used to split the asteroid, and as the asteroid splits, one part is going to turn its direction to the Earth.

In the next 15 min, Tieneel saw on his software that the missile was being taken out, and he soon ran to see. The missile was missing. In the next 5 hours, the Asteroid went past Earth. Tieneel began to cry. Dr.Khalyan called Tieneel, and said that he took the missile, and told Tieneel to never return back, or said that he will be arrested and know as a terrorist, and will be trapped forever.

Like Dr.Khalyan planned in the next 10 years, everything was running well, The world was in another unimaginable world. Everything was fine, but not everything was perfectly running, until you carefully do things. Another extraterrestrial came back. Endglobe is another future to see.

ENDGLOBE 2

To begin this was the
